DISCUSSION

Mauger et al.' 610 relates to a mobile communications network comprises a PCN network (60-64) including a plurality of radio cells under the jurisdiction of an MSC (mobile-services switching center). One or more of said cells comprise a fixed base (60, 61) for a mobile subscriber (71). Location information regarding the fixed bases being stored in a fixed location register (FLR). When the mobile subscriber roams into such a fixed base location (60, 61) a respective service type is provided. In particular, the fixed base may be a business site (60) with a PABX network. When the mobile subscriber roams into the business site, calls involving him are routed via the PCN network or rather the base station controller (BSC) thereof, which is intelligent in that it has MSC functionality located thereat. Thus a mobile phone can act as a desk phone, with all the same services provide, whilst the mobile subscriber is within the business fixed base.

Sasada CN'226 relates to a location registration system 10 comprises a mobile communication terminal 12 and a location register 14 for carrying out location registration of the

mobile communication terminal 12. The location register 14 comprises a storage § 16 for storing the number of stays of the mobile communication terminal 12; a location registration period determination § 18 for determining a period of location registration of the mobile communication terminal 12 according to the number of stays of the mobile communication terminal 12 stored in the storage § 16; and a location registration control § 20 for transmitting the period of location registration determined by the location registration period determination § 18 to the mobile communication terminal 12, receiving location information of the mobile communication terminal 12 transmitted therefrom in response to the transmitted period of location registration, and carrying out location registration of the mobile communication terminal 12 according to the received location information.
